

# PFD Training for Healthcare Professionals

One day course suitable for healthcare professionals working with children including:

- Introducing the ICF diagnosis Paediatric Feeding Disorder (PFD)
- Identification of skill deficits that affect a child's ability to learn to eat
- Introducing the concept of eating as a learning process, that can be challenging for some children.
- Challenging some of the myths and misconceptions around children's feeding and how these can be unhelpful.
- Differential assessment and diagnosis of Paediatric Feeding disorders
- How to differentiate between PFD and ARFID.
- Empowering your ability to have a hands on role in assessment and management of PFD.
- Toolkit of practical, hands on strategies to support mealtimes, food exposure and developing the skills to eating.
- Putting theory into practice
